June 15, 2012

Scope of bibliography -

This bibliography covers years 2000 to 2012. It is listed alphabetically by year and contains 542 records. The citations only include journal articles and represent 1,222 authors, 126 journals and 945 keywords.

Content focuses on atmospheric features of tornadoes, formation, forecasting, shared characteristics with other climate events and social impact. It excludes articles related to agriculture and impact on animal populations. Citations primarily focus on North Atlantic tornado occurrences however, other regions are represented.

The bibliography was created using Endnote (desktop X5 ver) and compiled using imported citations from the *American Meteorological Society* journals and *Thompson's Web of Science* database.
