

In the original set of about 80 cases, HEDAS showed promise in assimilating aircraft data, but had issues with a distinct weak bias at initial times for strong storms (spinup).

For 2012, a number of upgrades were made to HEDAS:

1. Use of the most recent version of HWRF (V3.4).
2. Use of restart files so that all prognostic variables are updated (including vertical motion tendency)
3. Cases are set to mimic operations (time window ± 3 h instead of based on flights)
4. Data are assimilated in storm-relative coordinates due to possible stretching of vortex due to storm movement during cycling.

These changes were tested for Hurricane Earl (11 cases) and led to further substantial improvements to track forecasts and a reduction of the low intensity bias.

H3VK - 2011 version of HEDAS
HWEK - 2012 version of HEDAS

HEDAS has been run for 52 cases in the Atlantic during 2012 (whenever aircraft data are available).

All aircraft data (dropwindsonde¹, flight-level², SFMR, Doppler) are assimilated if within the time window.

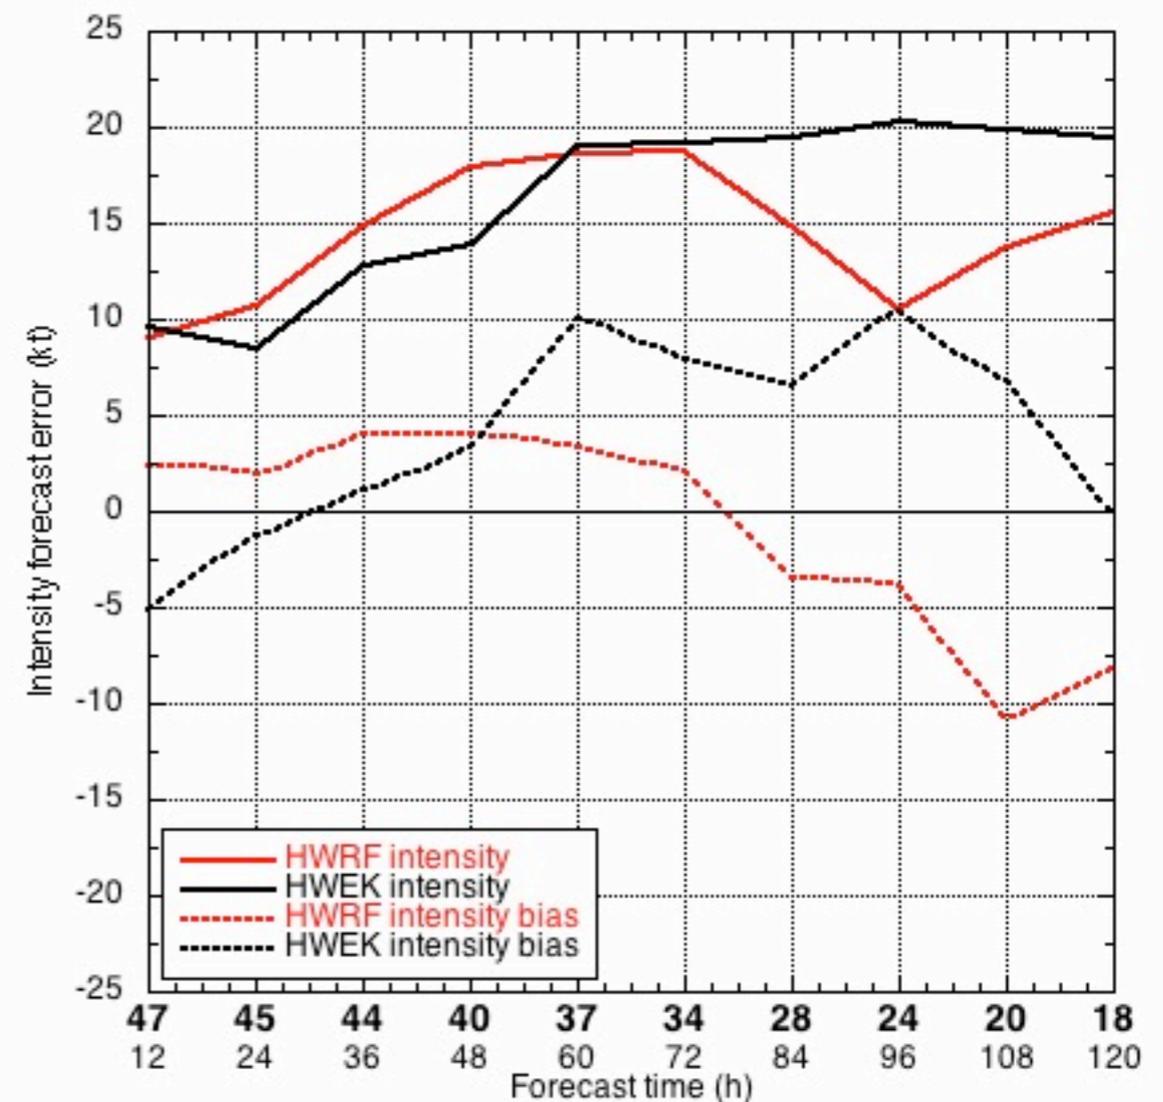

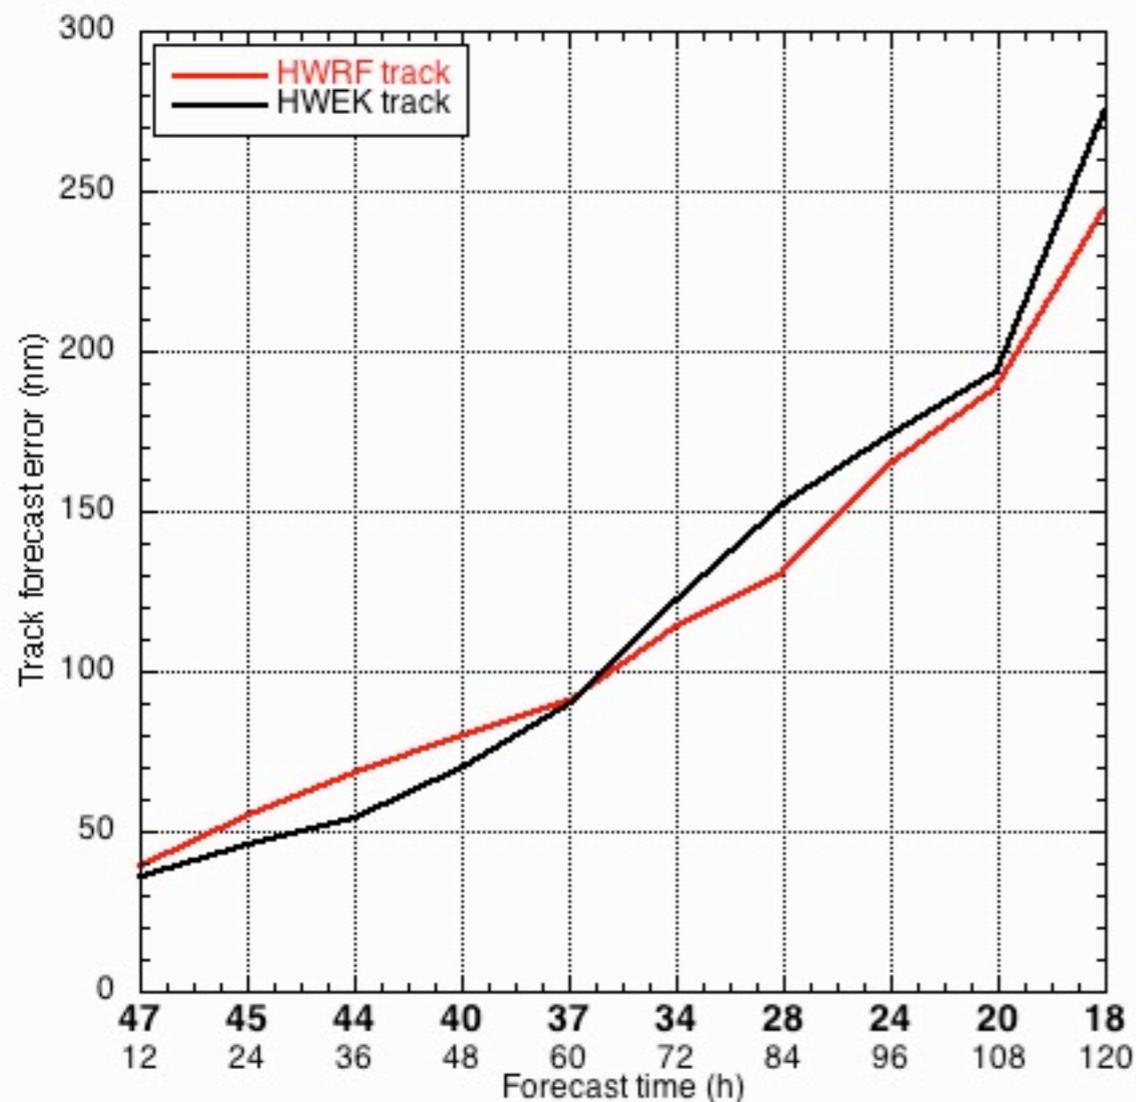

9 P-3 flights were conducted in Isaac and 3 in Leslie for 13 HEDAS cases with Doppler data (one flight had data in two separate forecasts).

Isaac had the second highest number of flights since we started in 2008 (Earl had 11).

¹Including sensor drift

²Including new data from G-IV

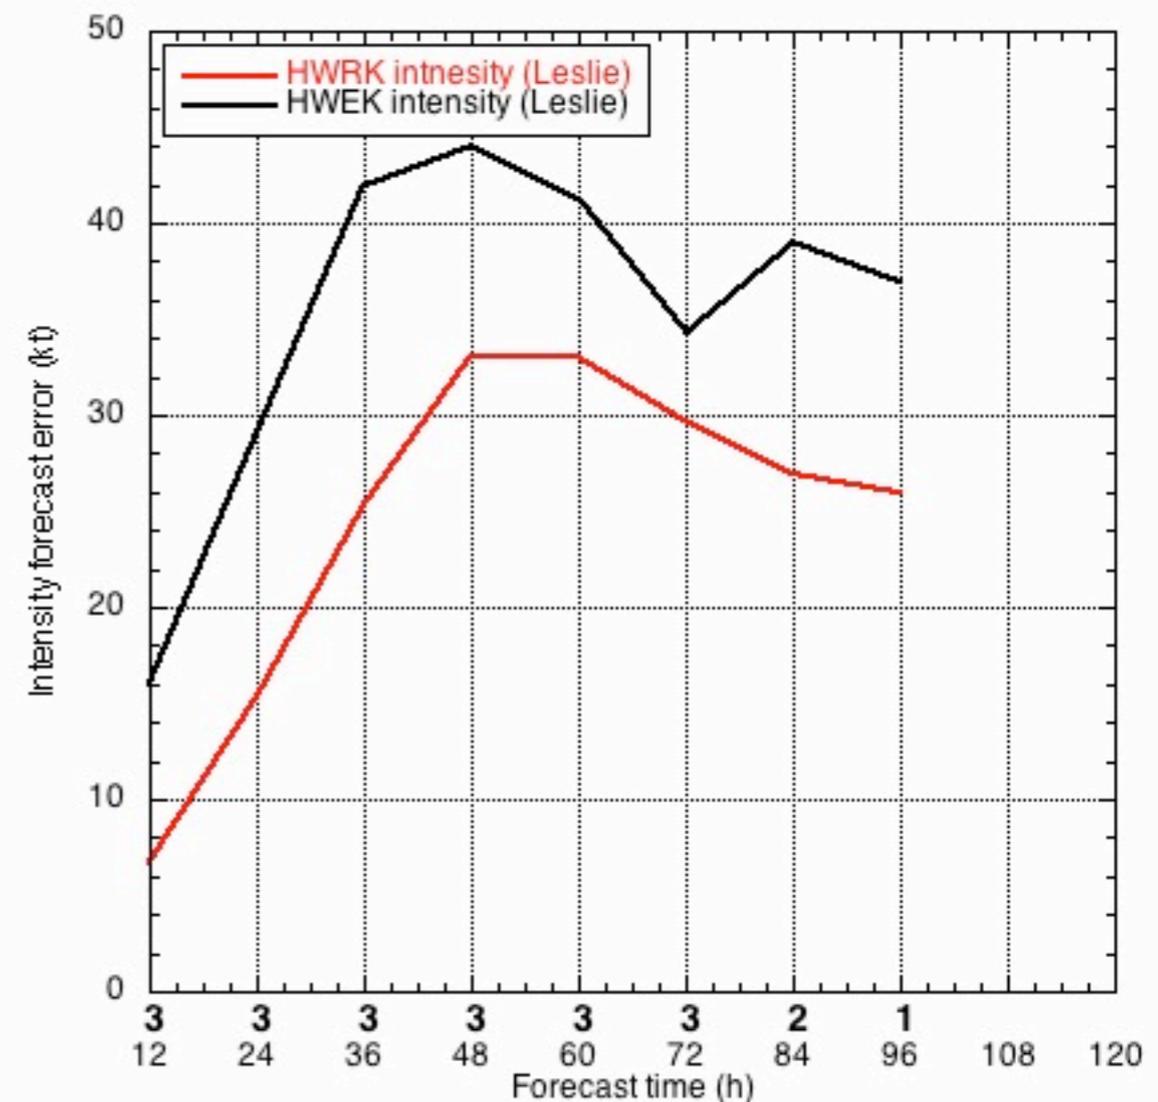

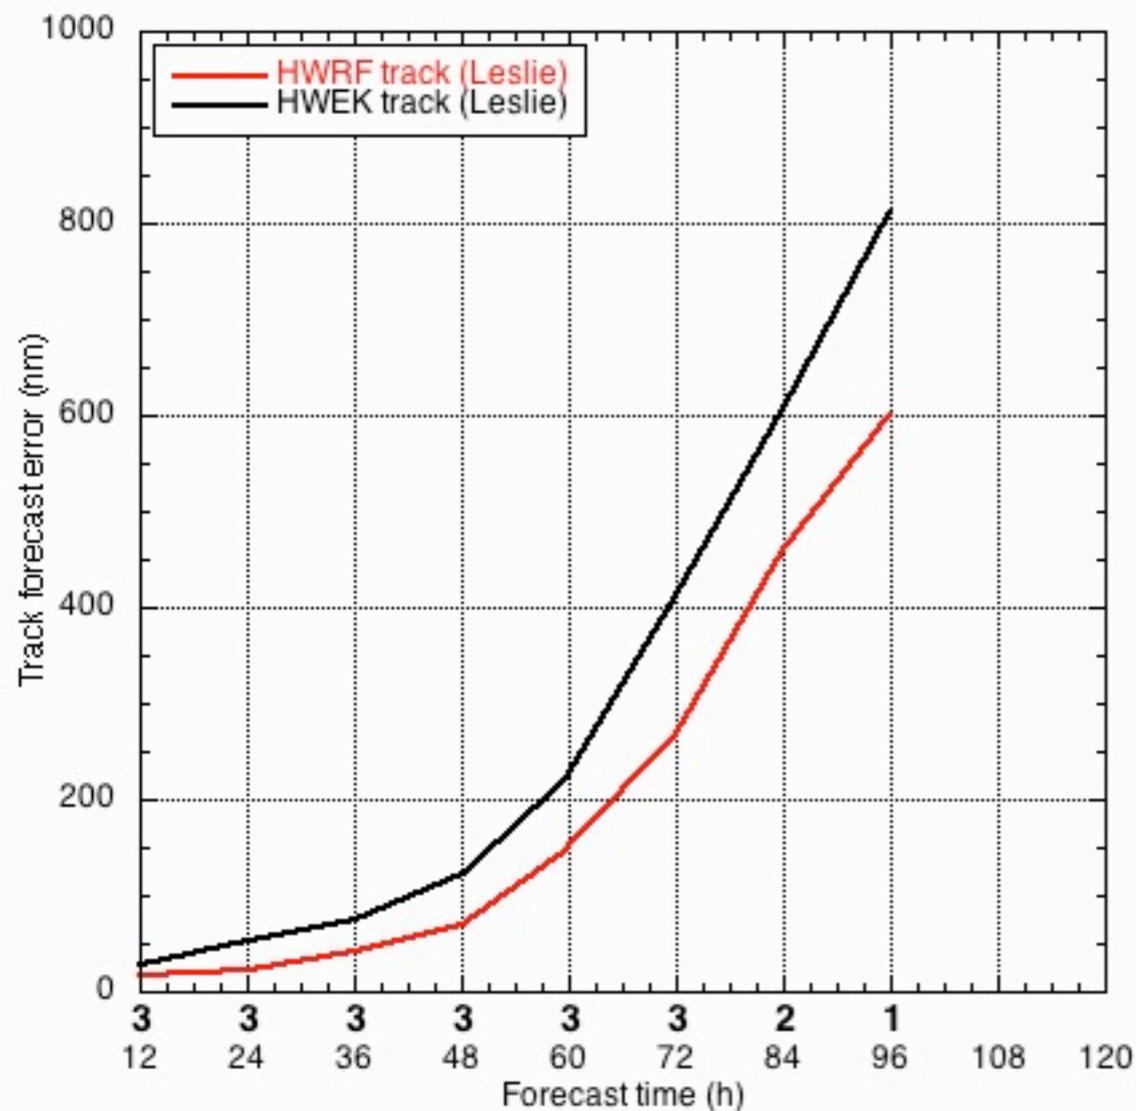

HEDAS ICs allowed for improved track (up to 21%) and intensity (up to 22%) forecasts versus HWRF through about 60 h

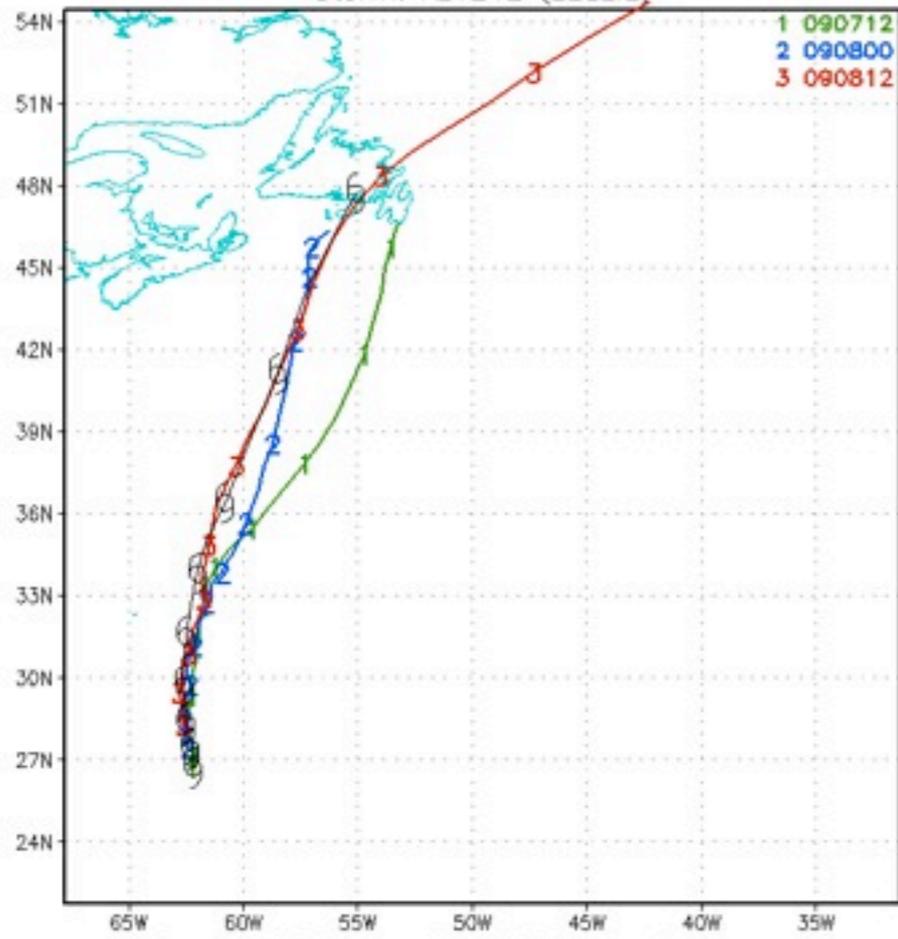

Hurricane Leslie

3 cases, all with Doppler data

Large forecast degradations

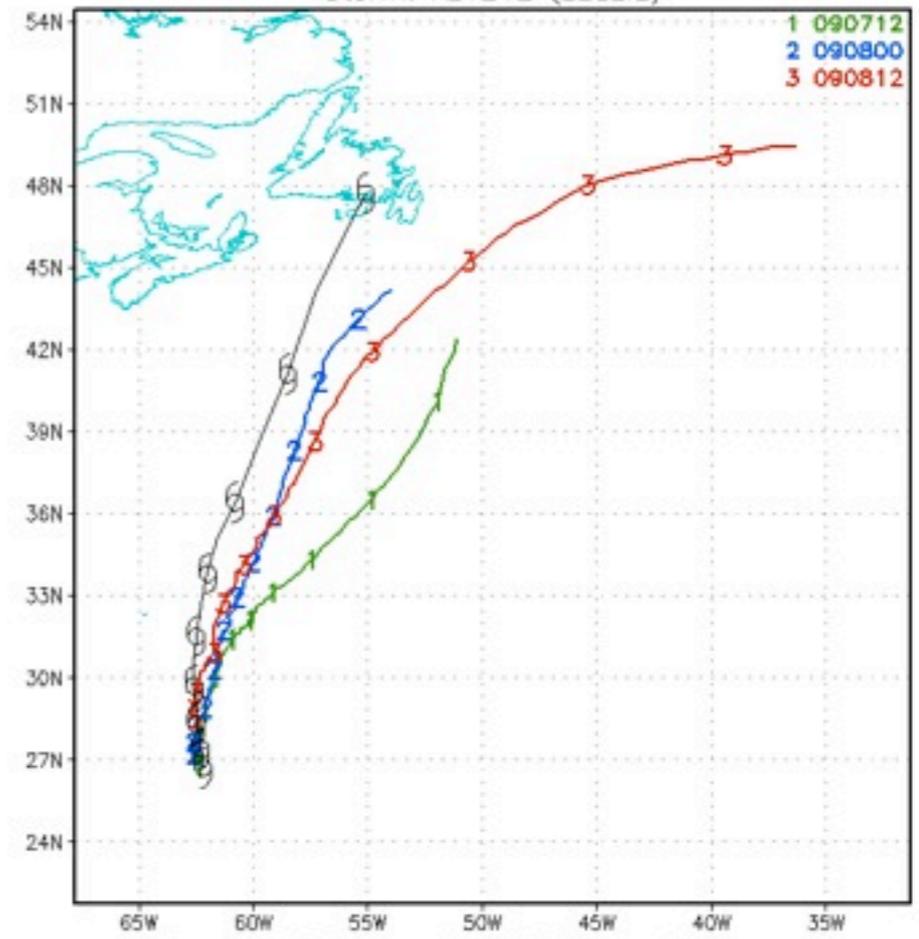

2012 Tropical Cyclone Tracks
Storm: AL1212 (LESLIE)

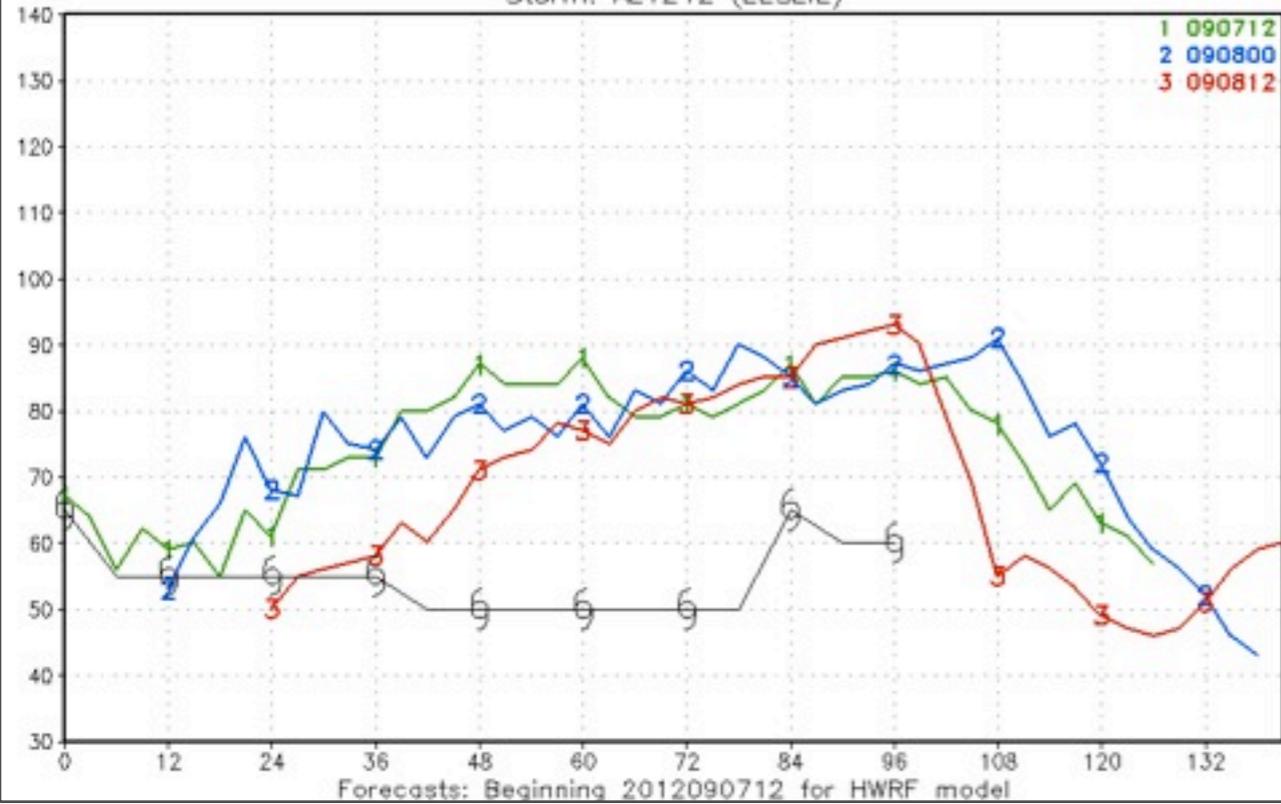

Forecasts: Beginning 2012090712 for HWRf model
Observed: Beginning 2012090712, every 12 hours

2012 Tropical Cyclone Tracks
Storm: AL1212 (LESLIE)

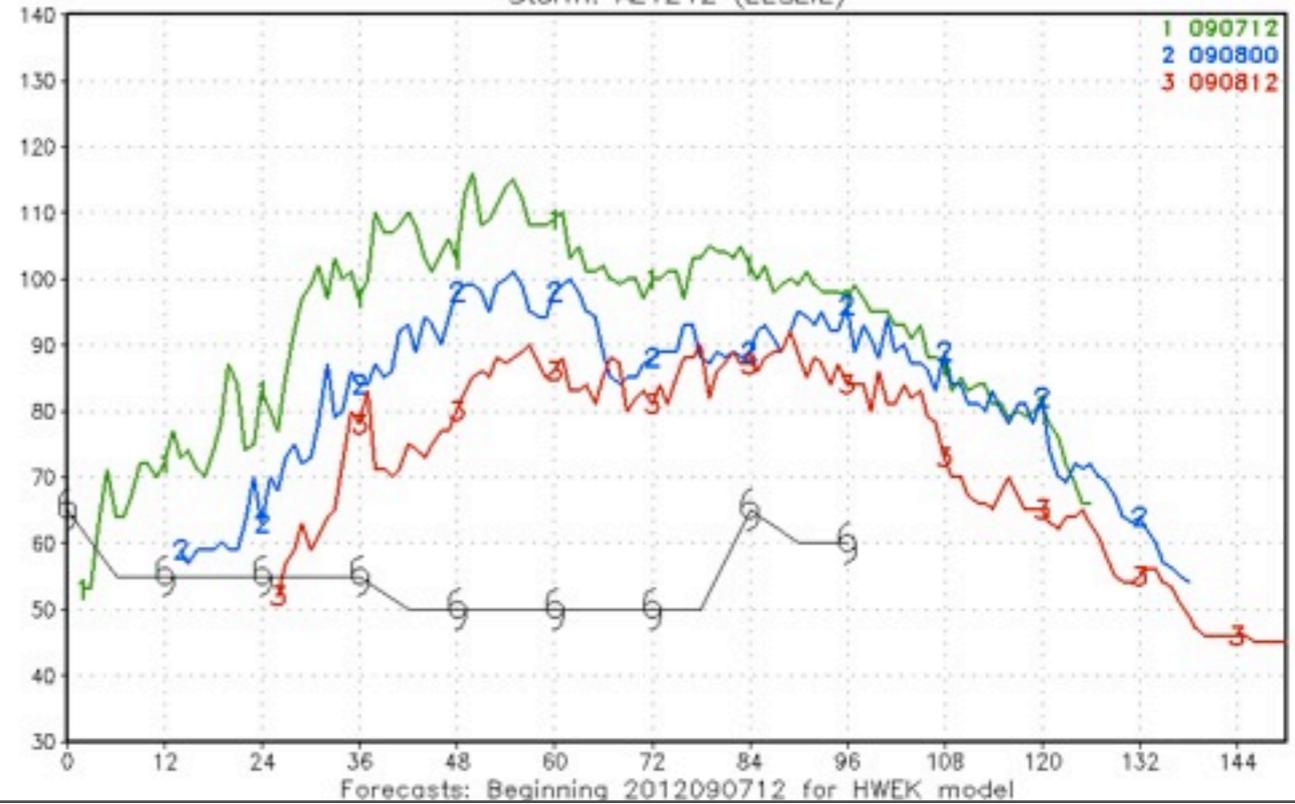

Forecasts: Beginning 2012090712 for HWEK model
Observed: Beginning 2012090712, every 12 hours

2012 Tropical Cyclone Tracks
Storm: AL1212 (LESLIE)

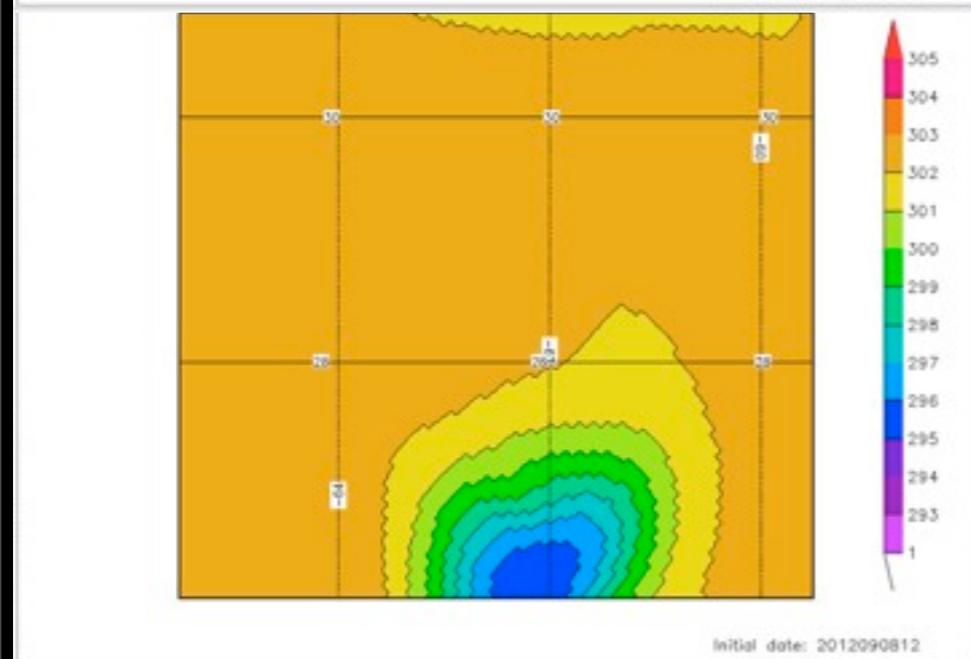

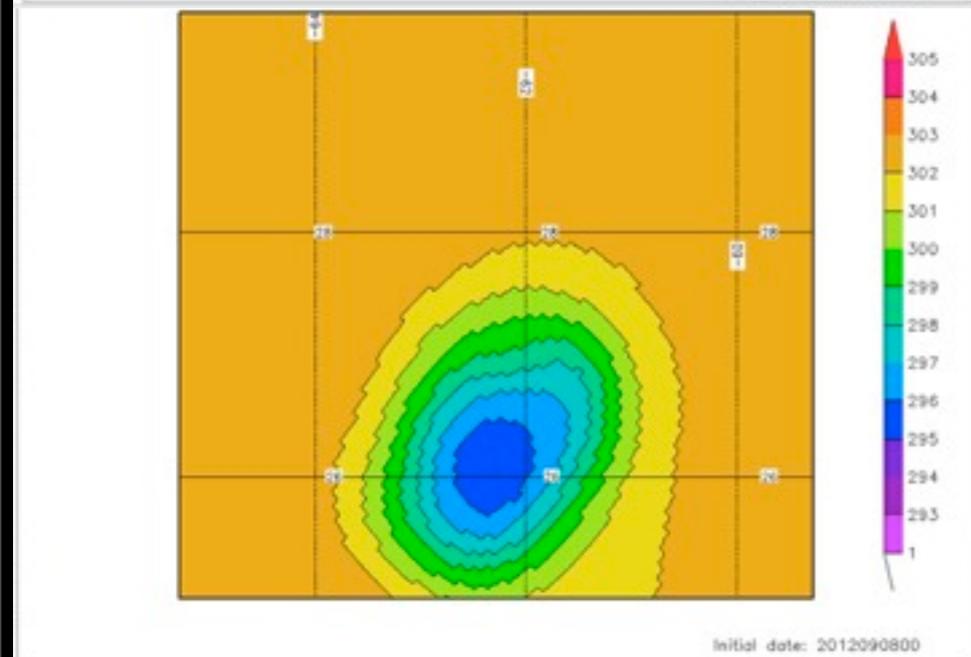

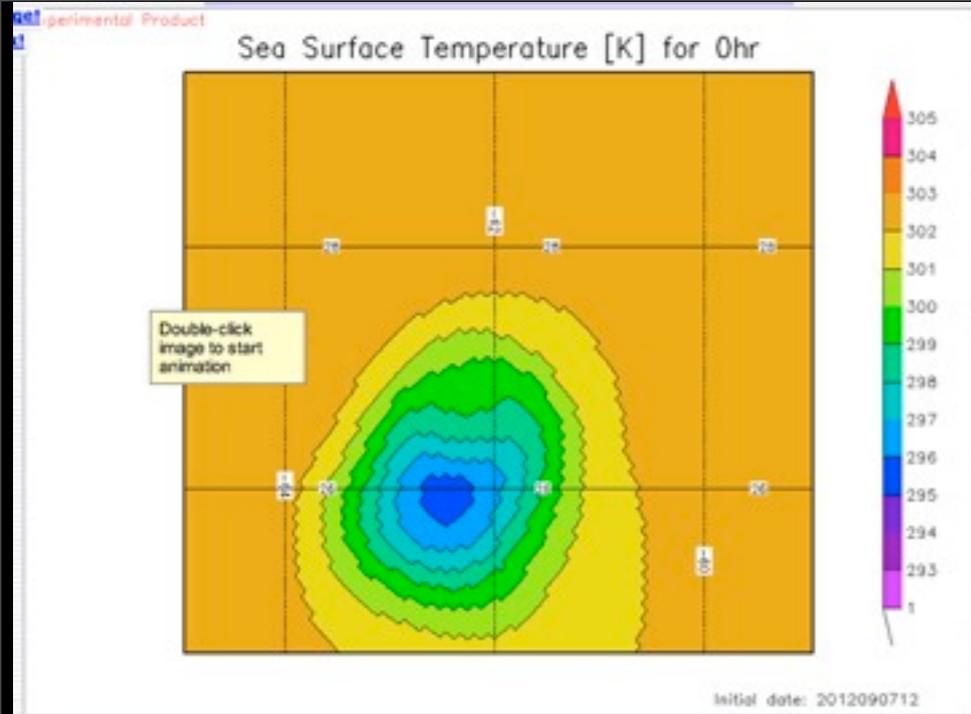

Forecasts: Beginning 2012090712 for HWRf model

2012 Tropical Cyclone Tracks
Storm: AL1212 (LESLIE)

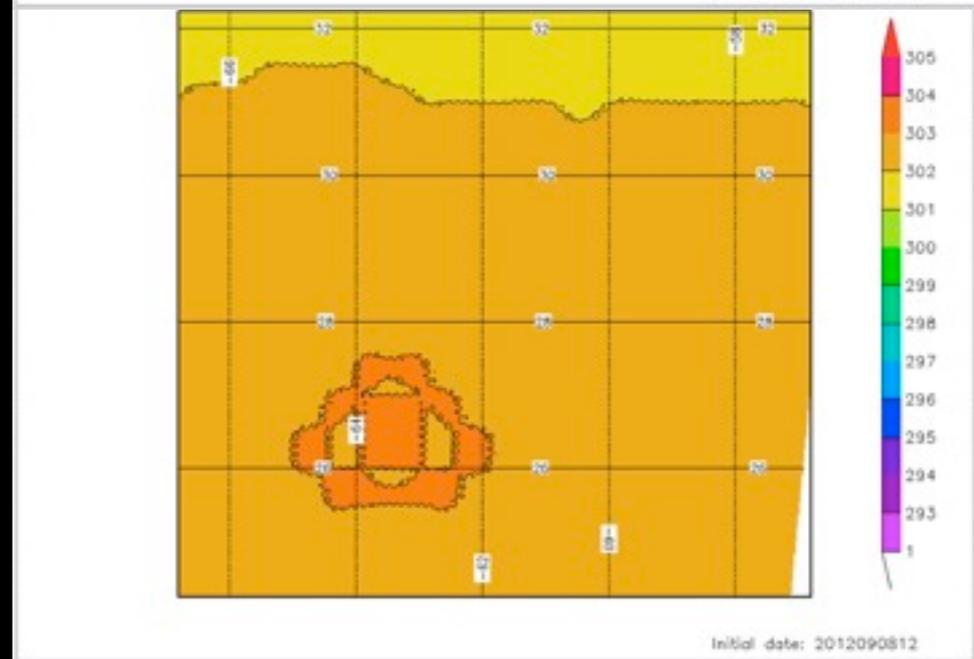

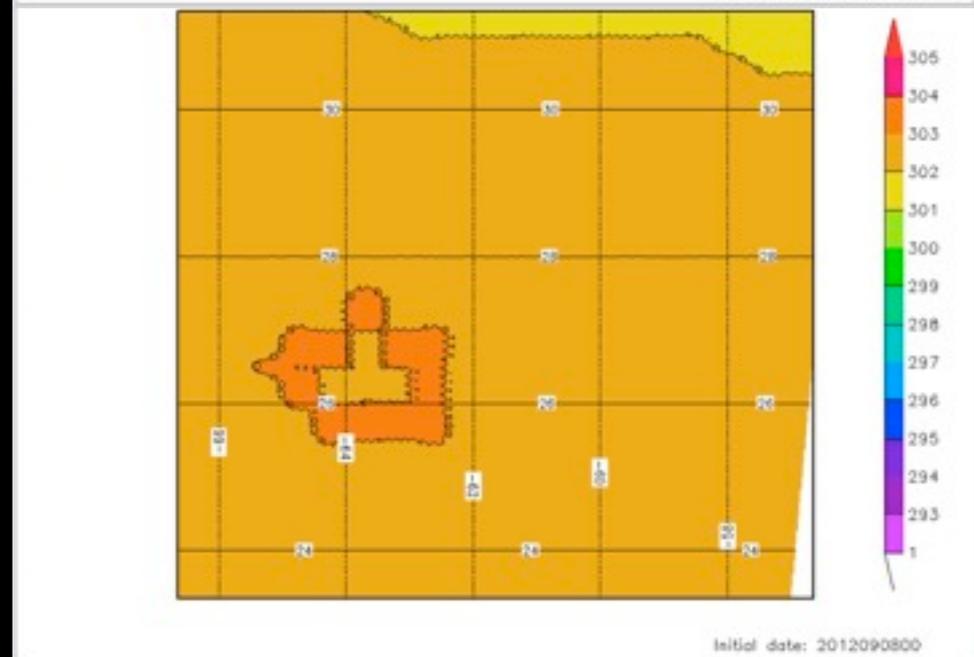

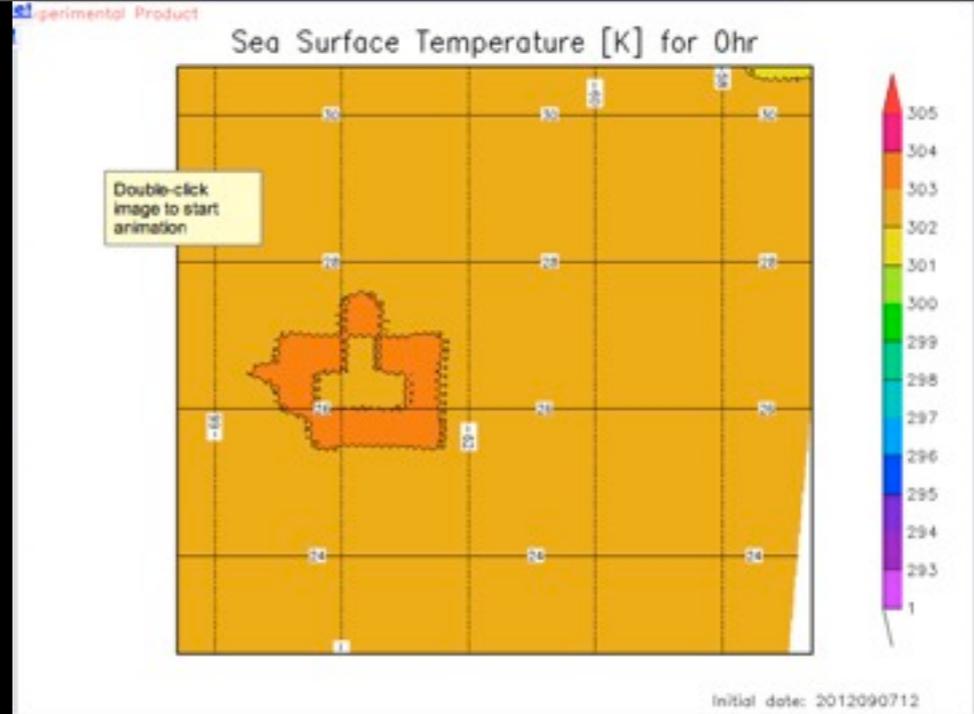

Forecasts: Beginning 2012090712 for HWEK model

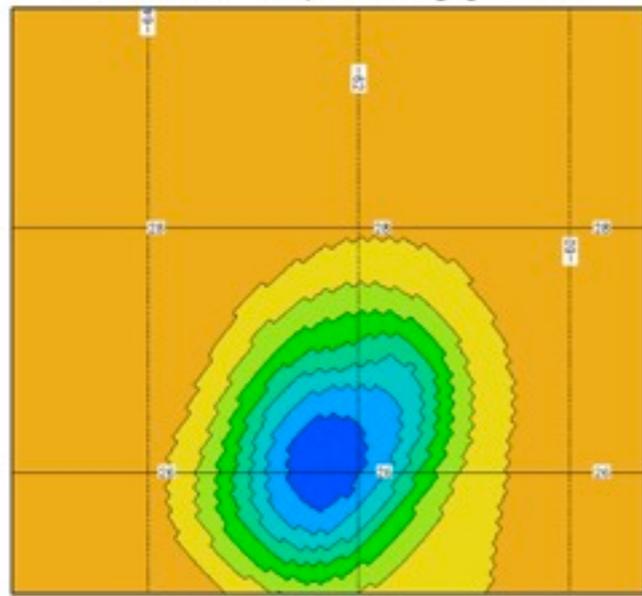

HWRF

It is likely that the ocean had a major impact on this case due to its very slow motion. HWRF with HEDAS IC is not coupled, uses GFS SST analysis.
