## Radar Scientist

Flight ID_	180926 11 Storm General			
Radar Scie	entist Rogers Radar Technician Mescaro			
The on-board radar scientist is responsible for data collection from all radar systems on his/her assigned aircraft. Detailed operational procedures and checklists are contained in the operator's manual. General supplementary procedures follow. (Check off or initial.)				
Preflight				
1	Determine status of equipment and report results to lead project scientist (LPS).			
	Confirm mission and pattern selection from the LPS			
3 4.	Select the operational mode for radar system(s) after consultation with the LPS.			
4.	Complete the appropriate preflight check list.			
In-Flight				
1.	Monitor the Tail Doppler Radar function regularly, using the real-time TA display, to make sure the Doppler radar is scanning and working normally			
2.	Once at the IP, request that the tilt be adjusted to remove sea clutter			
3	Request that the LF radar is set to full scan (non-sector mode) for first Figure 4.			
4	Maintain the Doppler Wind Parameter form as well as a written commentary in the Radar Event Log of event times, such as ending and restarting of radar recording. Also document any equipment problems or changes in R/T, INE, or signal status.			
Post flight				
1.	Complete the summary checklist and all other appropriate forms.			
2.	Download all Belly (LF) scan radar data files to thumb drive.			
3	Download all tar'd (TA) radar data files to thumb drive.			
4.	Brief the LPS on equipment status and turn in completed forms and thumb drives to the LPS			
5	Debrief at the base of operations.			
6.	Determine the status of future missions and notify HFP Director as to where you can be contacted.
