Model Number	SBE 04C		Serial Numbe	er:	0438	354
sensor drift. If the	calibration identifies a rk is completed. The 'd	ted 'as received', without problem or indicates cel as received' calibration is	l cleaning is nece	essary, then	a second ca	libration is
An 'as received' calibration certificate is provided, listing the coefficients used to convert sensor frequency to conductivity. Users must choose whether the 'as received' calibration or the previous calibration better represents the sensor condition during deployment. In SEASOFT enter the chosen coefficients. The coefficient 'slope' allows small corrections for drift between calibrations (consult the SEASOFT manual). Calibration coefficients obtained after a repair or cleaning apply only to subsequent data.

'CALIBRATION A	AFTER CLEANING	G & REPLATINIZINO	G' □ Perf	ormed	✓ Not	Performed
Date:		Drift sin	ce Last cal:			PSU/month*
Comments:						
*Measured at 3.0	S/m					

Cell cleaning and electrode replatinizing tend to 'reset' the conductivity sensor to its original condition. Lack of drift in post-cleaning-calibration indicates geometric stability of the cell and electrical stability of the sensor circuit.
