Hello,

One question that I have is referred to this paragraph:

*Did NOAA know that the ship being used to launch the drifters was also
discharging material into the ocean as a geoengineering experiment?*

No. NOAA learned of the discharge via the Guardian article on Oct. 15,
2012.. NOAA was originally told that the drifter data would be used to
collect ocean current data in support the Haida Salmon Restoration research
effort.

Was there any information given to us on what this research effort
was about ?

Gustavo
