

(1) Add 50 to GMT date to indicate wind speeds in KNOTS.
(2) Code for the highest mardatory pressure level with a wind. Use
the following numbers: $3=300 \mathrm{mb}, 4=400 \mathrm{mb}, 5=500 \mathrm{mb}, 7=700 \mathrm{mb}$.
(3) $\quad l=l a t N$, long $E$; $3=$ lat $S$, long $E ; 5=$ lat $S$, long $W$;
$l=$ lat $N$, long $E ;$
$7=$ lat $N$, long $W$.
(4) Surface pressure in whole millibars (hundreds, tens \& units) -
tenths value rounded off. (e.g. 1017.6 mbs encoded as 018).
Coding temps: Enter even tenths value if temp positive.
Enter odd tenths value if temp neqative.
(6) See code table for Dew pt. depressions...
(7) 88999 indicates no trop in sounding. "77" is indicator for
max. wind (in mbs) \& is only sent when sounding is above
500 mb and is greater than 60 knots.
(8) XXBB same as XXAA with "00" indicator a repeat of the first
level sent in XXAA...
