Hi Rick

I am noticing some discrepancies between the deployment date/location of the drifters from the deployment log, and the date/location of the first data point in the data files. I am using these data to try to find out where the ship was, and when. Is it normal for the drifters to not transmit data for a few days after deployment? Should I use the deployment log as a better indication of where the ship went?

Hopefully the attached spreadsheet is fairly self-explanatory?

Thanks again for your help with this.

Regards

Pete

> First, I see some errors in the deplog for four drifters which we'll fix ASAP - we list them as S and E, when those four should be N and W.
>
> Next, I apologize for not previously telling you this: when the WMO number is, for example, 4600565 on our site, look for 46565 on the data server. The additional 0s are due to this drifter using an Argos-3 PMT in Argos-2 PTT mode - a technicality that you don't need to worry about when examining the data
>
> From the GTS server at www.aoml.noaa.gov/phod/trinanes/xbt.html, I clicked-and-dragged to get the North Pacific in the mini map, selected "GTS buoys", and downloaded all data since 15 August. Note that this is delivered in a pop-up window, so if you have pop-up blocked you'll have to allow an exception. The resulting data includes 46565, 46907, 46538, etc. (the drifter fixes that were transmitted on the GTS).

that the Ocean Pearl deployed. I included the deployment info on the maps
I made last week, see magenta circles in figure attached. I am still a little
confused about the drifter IDs, so I haven't included the drifter tracks
here, just the deployment location. As you can see, there is some high
chlorophyll in the region where the ship spent a considerable amount of
time. I will try looking at the 8-day data again to see if that helps but
so far it has been really cloudy and difficult to discern much.

>>> Hi folks,
>>>
>>> Just talked to someone at NOAA about the Argo drifters deployed as part
of this project. They're drifters from AOML, not standard Argo floats.
You can see the group of Argo drifters deployed near Haida Gwai in these
figures. Most fo them are quite a lot farther offshore than I supposed
they would be. As won't surprise you, AOML was not fully informed about
the purpose of this project. They frequently work with citizen groups to
deploy drifters in areas where they do not have enough coverage. I believe
they would rather strenuously object to being called collaborators in this
"experiment".
