Hi Everyone

Rick Lumpkin got back to me re how to access the data from the drifters that the Ocean Pearl deployed. I included the deployment info on the maps I made last week, see magenta circles in figure attached. I am still a little confused about the drifter IDs, so I haven't included the drifter tracks here, just the deployment location. As you can see, there is some high chlorophyll in the region where the ship spent a considerable amount of time. I will try looking at the 8-day data again to see if that helps but so far it has been really cloudy and difficult to discern much.

Regards

Pete

Rick, can you please help me with the drifter IDs. In the data file the IDs in this general part of the ocean range from 21539 to 62776. But those numbers don't look like the IDs or WMO numbers in the deployment log:

Hi folks,

Just talked to someone at NOAA about the Argo drifters deployed as part of this project. They're drifters from AOML, not standard Argo floats. You can see the group of Argo drifters deployed near Haida Gwai in these figures. Most of them are quite a lot farther offshore than I supposed they would be. As won't surprise you, AOML was not fully informed about the purpose of this project. They frequently work with citizen groups to deploy drifters in areas where they do not have enough coverage. I believe they would rather strenuously object to being called collaborators in this "experiment".

cheers, Roberta
