goodness, there is nothing in the Guardian article saying the buoys were given to the experiment....the phrase ".....loaned fromNOAA...." seems to be just plain wrong (even if we deployed drifters off of the same ship: "The dump took place from a fishing boat in an eddy 200 nautical miles west of the islands of Haidi Gwaii...."....???) .

suggest total KISS reply: buoys give basic information of ocean temperature and salinity necessary to understand our planet and predict weather and climate, and to do so they need to be depoyed on a 5X5 basis, using ship routes that encourage even distribution (merchant and research). All resulting data is available freely and openly, in concert with NOAA and USgov policy.

If NOAA lawyers are not on our side who are?

I will be happy to draft whatever is necessary to convince them that there is nothing here and/or talk with whomever.

thanks and cheers,
cec

Rick,

Here is the e-Mail from IA downtown containing the primary
lin=
k to the iron-fertilization experiment and the secondary links which
includ=
e a link to NOAA Argos.

Thank you,
Steve
