CONTENTS

DRIFTING BUOY DATA FROM THE EQUATORIAL PACIFIC FOR THE PERIOD JUNE 1, 1985 THROUGH JUNE 30, 1987

INTRODUCTION

A total of 60 satellite-tracked free drifting buoys were in operation in the eastern tropical Pacific Ocean during the period June 1, 1985 through June 30, 1987. Details of their trajectories and performances are presented and discussed in this data report.

BUOY CONSTRUCTION

With the exception of two buoys (4420 and 4422) that were of the FGGE design constructed by the Polar Research Laboratory, Inc. and two other buoys (6224 and 6230) made by Technocean, these buoys were designed and built at NOAA/AOML (Bitterman and Hansen, 1986).

As a test and to compare their performance, one of the Technocean buoys (6224) was deployed with two AOML mini-buoys (4806 and 4814) and another (6230) with 4807 and 4811. Detailed trajectories of these two sets are shown on pages 15 and 16.

All AOML buoys were deployed with a 10 m length subsurface holey sock drogue on a 10 m long nylon tether and contained a drogue sensor and sea surface temperature and voltage sensors. Buoys 2084 and 2086 did not have drogues, and buoy 2087 had a drogue but no drogue sensor. The FGGE-type buoys carried 2 m x 10 m windowshade drogues on a 10 m long tether, and the full set of sensors. The Technocean buoys used a TRISTAR drogue, but were released without a drogue-loss sensor.

DATA ACQUISITION AND PROCESSING

Messages transmitted by the buoys are received by the satellites and relayed to the ground stations, then sent to the Argos Global Processing Centers, where they convert buoy message into location and/or sensor data, and finally distributed to the owners.

Once a month a tape was sent to AOML where the data were edited and interpolated (Pazos, 1988).

DATA DISPLAY

Table 1 shows a complete history for each buoy. Table 2 shows conversion from Julian Days (taking January 1, 1979 as day 1) to day, month and year. Bar charts are presented in Figures 1-4 to illustrate time of deployments and length of buoy lives. A spaghetti diagram is displayed on page 14, where beginning of each track is marked with a star, and ending of the track is marked with a closed circle. Monthly displacement of buoys can be found from pages 17 to 25. Trajectory and time series plots for each buoy are displayed from pages 26 to 254. The first part of the track of buoys 2084, 2086 and

2087 were discussed and presented in a previous data report. Trajectory plots show the tracks from beginning to end of life, but time series plots show only the section after June 1, 1985. For all other buoys, the entire track and time series plots are displayed even if it continues after June 30, 1987. On each trajectory, the deployment position is marked with a star, a closed circle indicates end of track and an asterisk shows where the drogue was lost, if the buoy ends with its drogue on, an asterisk will not show up at all.

The temperature sensor record of some buoys is shorter than the trajectory because the sensor failed before the end of the buoy life (2982, 2984, 3141, 3134).

The trajectory of buoy 2280 shows a divided track because a ship picked it up for some time and then re-deployed it. The trajectory while it was on the ship was deleted.
