

A scalar indicator of the stability of the MOC

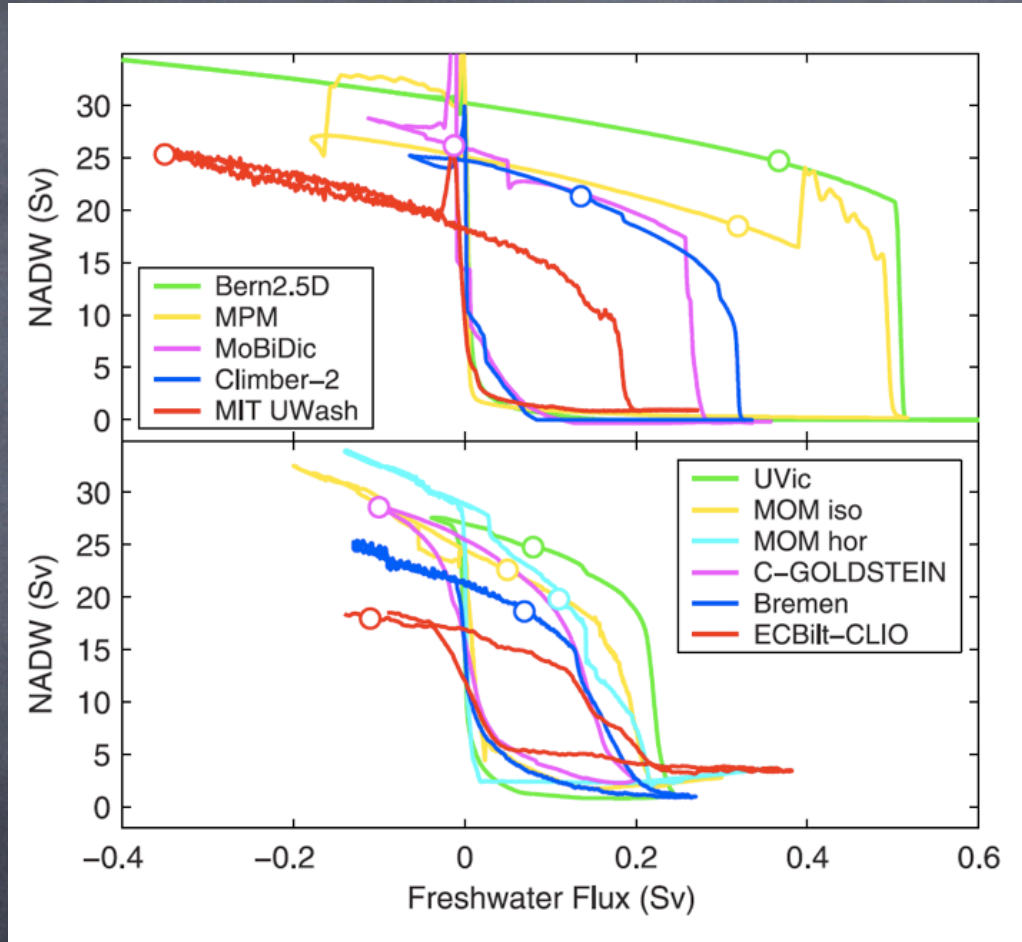

Kuhlbrodt et al., RoG, (2007)

S. Huisman, M. den Toom, H.A. Dijkstra and S. Drijfhout

IMAU (UU) and KNMI, The Netherlands

The Atlantic MOC may be sensitive to changes in the northern North Atlantic freshwater flux

γ_p

γ_p

What is a Bifurcation Diagram?

Example:

$$\frac{dx}{dt} = \lambda - x^2$$

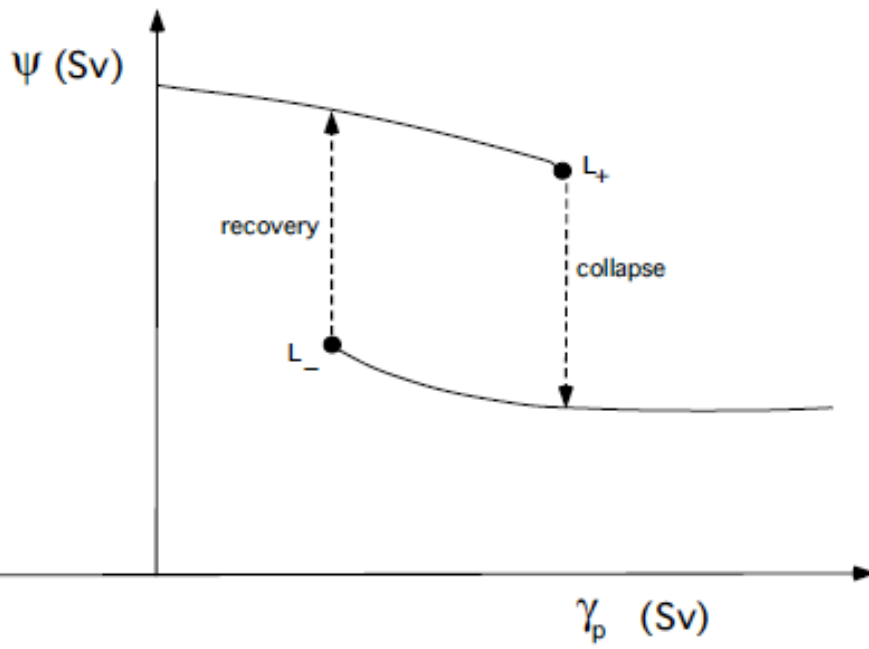

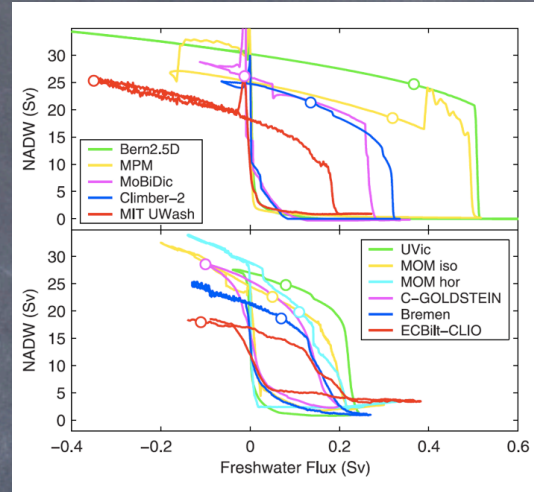

trajectories

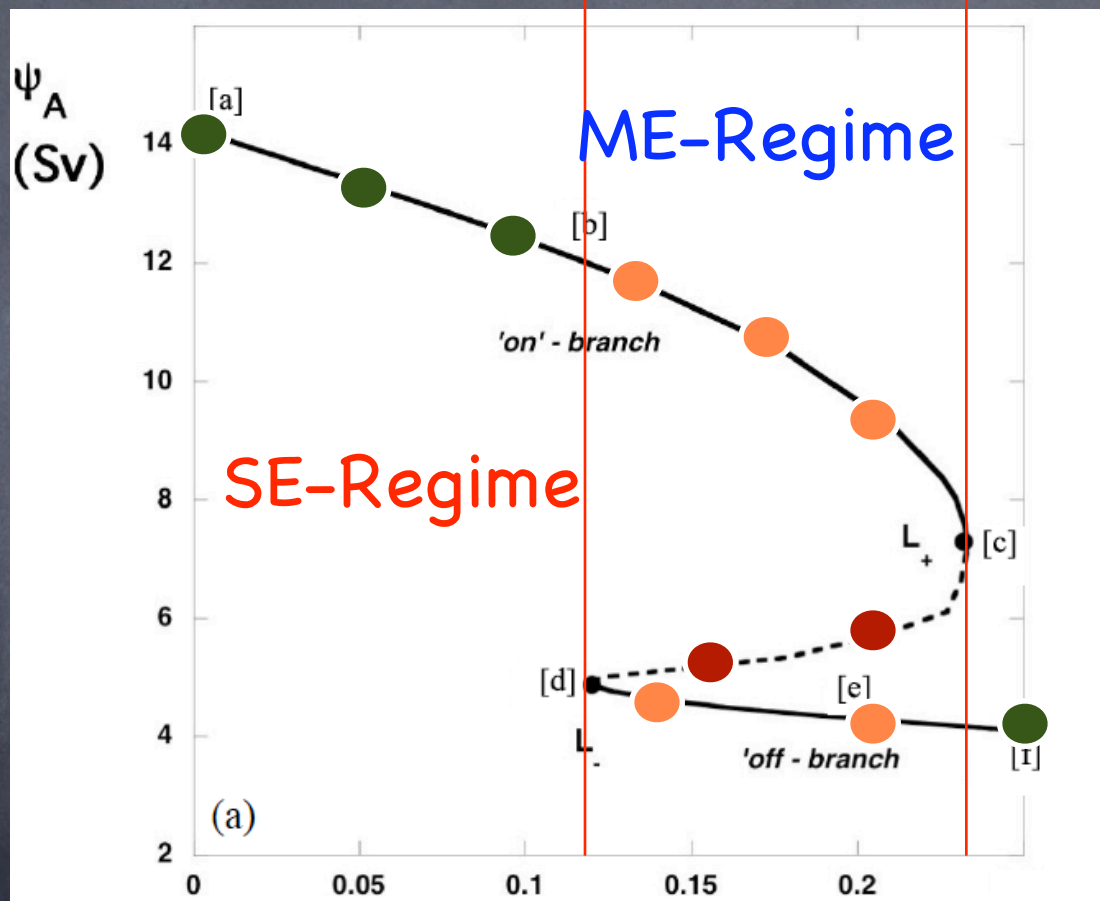

(partial) bifurcation diagram

Correspondence between quasi-equilibrium calculations and bifurcation diagrams, II

Bifurcation Diagram of a Global Ocean Model

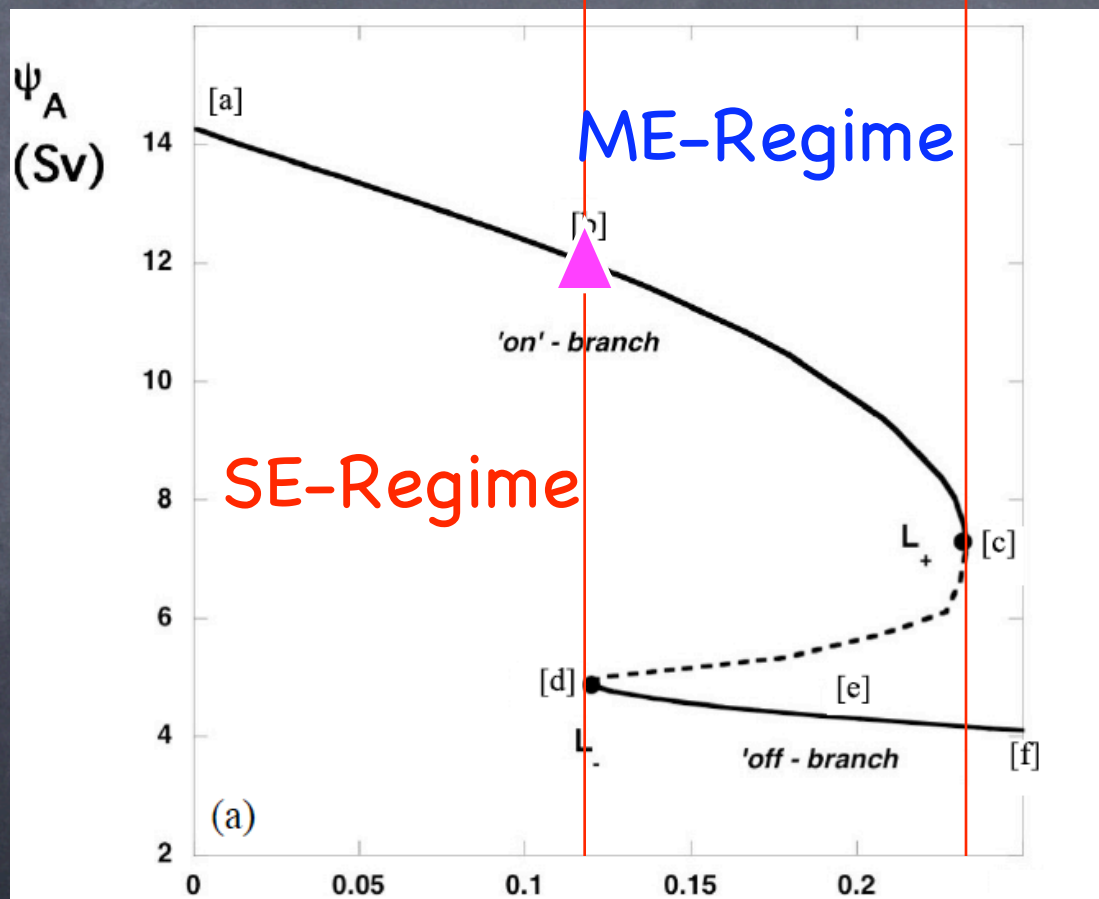

γ_p

γ_p

Temporal development of perturbations

What physics characterizes the MOC solution at the value of γ_p at the saddle-node L_- ?

Freshwater budget over the Atlantic

$$\int_{S_{Atl}} F_S r_0^2 \cos \theta \, d\phi d\theta = -\frac{1}{S_0} (\Phi(\theta_n) - \Phi(\theta_s)).$$

$$\theta = \theta_n$$

$$\theta = \theta_s$$

$$\Phi(\theta) = \int_{S_\theta} \left(vS - \frac{K_H}{r_0} \frac{\partial S}{\partial \theta} \right) r_0 \cos \theta \, d\phi dz$$

Indicators of salt export

$$M_{ov}(\theta) = -\frac{\eta}{S_0} \int \langle v \rangle (\langle S \rangle - S_0) dz ; M_{az}(\theta) = -\frac{\eta}{S_0} \int \langle v' S' \rangle dz.$$

$$v' = v - \langle v \rangle$$

$$S' = S - \langle S \rangle$$

$$\eta = \int r_0 \cos \theta d\phi ; \langle F \rangle = \frac{1}{\eta} \int F r_0 \cos \theta d\phi$$

$M_{ov} > 0 \rightarrow$ MOC exports salt

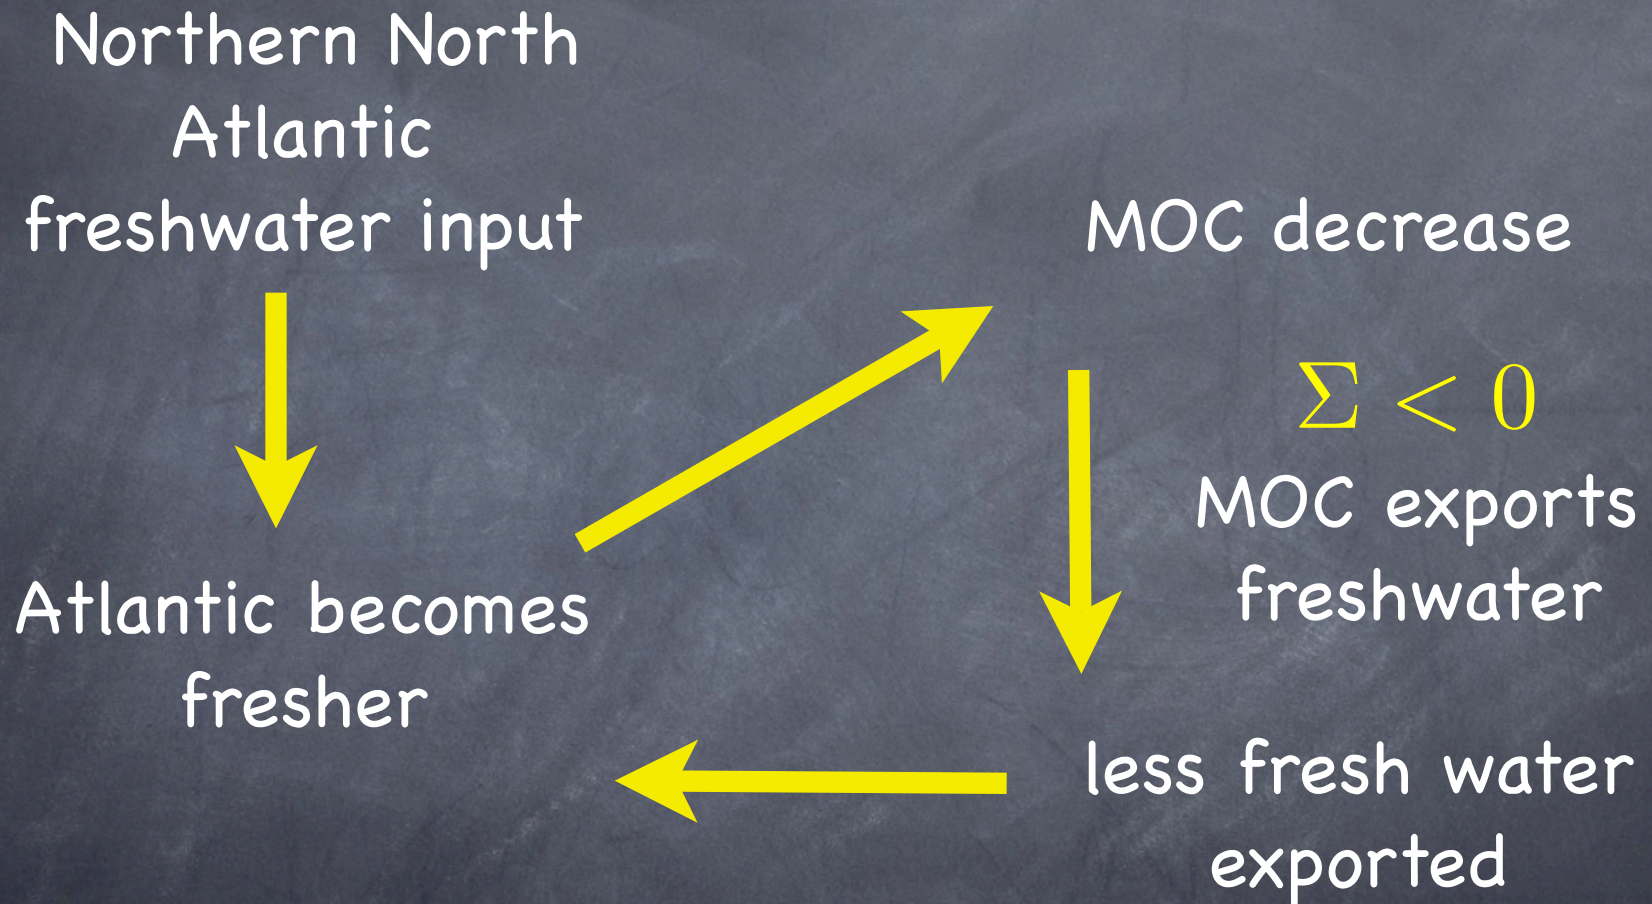

$M_{ov} < 0 \rightarrow$ MOC exports fresh water

A MOC stability indicator

$$\Sigma(\theta_n, \theta_s) = M_{ov}(\theta_s) - M_{ov}(\theta_n)$$

'Schematic' Physics

Precise physics: Huisman et al. JPO, (2009)

Rough estimates of Σ

Weijer et al. (1999): -0.3 Sv

Huisman et al. (2010): -0.1 Sv

Conclusions

The sign of the freshwater export by the MOC may be an indicator of the stability of the MOC

To obtain more accurate values of this indicator, additional observations along the southern boundary of the Atlantic are required
